protect 'n go™ infant comfort canopy

69000

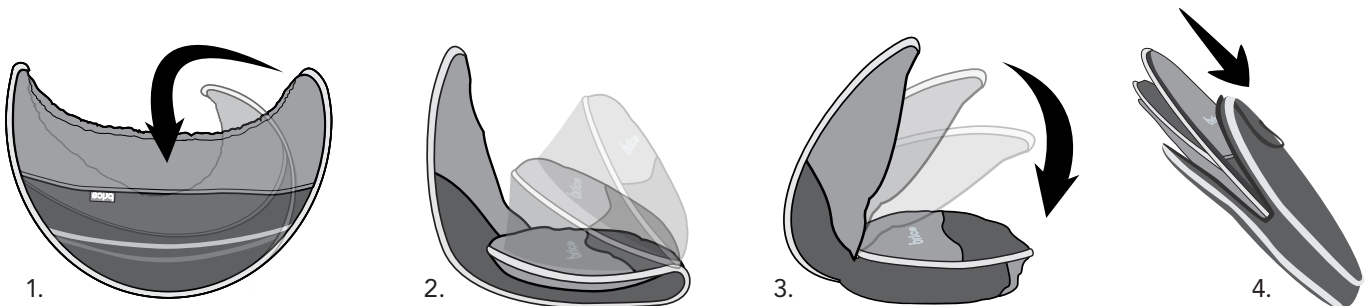

To Open

Before each use, inspect this product for damaged hardware, missing parts, sharp edges or torn fabric. Discard Protect 'n Go™ Infant Comfort Canopy™ if it is damaged, bent or broken. Do not substitute its parts.

Note: Zippered opening faces front of infant car seat

To Fold

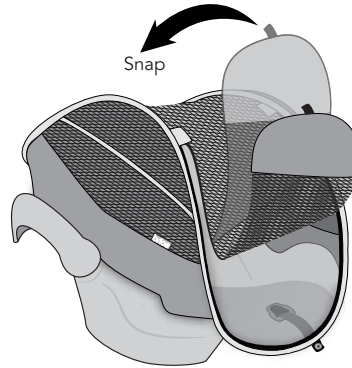

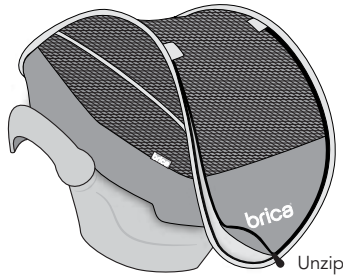

Helpful Tip: The frame of your Protect 'n Go™ Infant Comfort Canopy™ is made from spring steel and may twist if folded incorrectly. It can be easily adjusted back into shape by simply hand tracing the frame of the Protect 'n Go™ Infant Comfort Canopy™ to the spot where the twist occurs, and then rolling it back into the same angle as the rest of the frame.

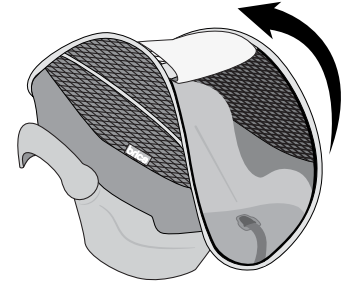

To Use

1. Opening Mesh Panel

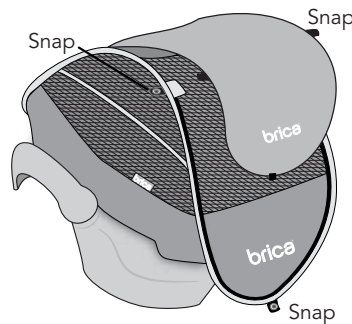

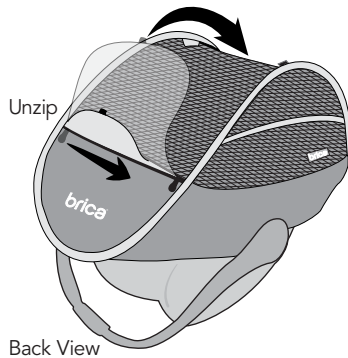

(Partial Coverage)

2. Supplemental Sun Cover (Full Coverage)

(stored in rear pocket)

Note: Sun Cover and mesh panel can be folded back at top snaps for sun coverage and access to seating area

Outdoor Safety Information

1. Sun Safety

Too much exposure to ultraviolet (UV) solar radiation can lead to skin cancer or other UV exposure related medical conditions. The use of a shade device is one of many measures that can be taken to avoid the harmful effects of solar UV radiation.

The supplementary sun cover of your Protect 'n Go™ Infant Comfort Canopy™ has a UPF 50+ rating and blocks over 98% of harmful UV radiation. It provides shade and protection from direct overhead sunlight. Even on a cloudy day, up to 80% of the sun's rays can pass through the clouds.

Since UV radiation may be transmitted through the mesh side walls of your Protect 'n Go™ Infant Comfort Canopy™, whose UPF rating is not UPF 50+, you should always combine the use of the supplementary sun cover with other UV radiation protective measures to achieve maximum sun protection for your baby.

UPF rated fabric should not be used longer than 12 months as wear and tear of the fabric can affect its UPF rating over time. Be sure to check your Protect 'n Go™ Infant Comfort Canopy™ regularly for wear and tear that may affect its UPF rating.

Understanding UPF

Ultraviolet Protection Factor (UPF) measures the ability of a fabric to block harmful ultraviolet (UVA and UVB) rays. For example, a fabric rated UPF 50 allows only 1/50th, or 2% of the UV radiation to pass through the fabric.

UPF ratings are derived from accepted test standard AATCC 183-2004. The following table summarizes labeling guidelines used internationally.

Classification Category	UPF Range	UPF Labels	% UV Blocked
Good UV Protection	15 - 24	15 , 20	93.3 - 95.80
Very Good UV Protection	25 - 39	25, 30, 35	96.0 - 97.45
✓ Excellent UV Protection	40 - 50+	40, 45, 50, 50+	Above 97.5

NOTE: Sun Protection Factor (SPF) is a measurement used for sunscreens only.

2. Protection against insects

The United States Center for Disease Control recommends the use of mosquito netting over infant carriers when you are outdoors with infants. Mosquitoes have been known to transmit the West Nile virus and other blood born diseases such as malaria. Other insects such as black flies can be an irritant and cause painful bites.

The body of the Protect 'n Go™ Infant Comfort Canopy™ is comprised of fine insect netting to help repel insects. In order to achieve protection against insects, the elastic perimeter of the Protect 'n Go™ Infant Comfort Canopy™ must be snug against the infant car seat and the zipper ceiling must be closed. Any spaces in between the elastic perimeter and the seating device may permit insects to enter the cover. To optimize protection against insects, use your Protect 'n Go™ Infant Comfort Canopy™ in combination with other insect repelling measures.

3. Overheating prevention

Prolonged exposure to direct sunlight may cause a child to overheat and lead to serious injury or death of the child. **NEVER** leave your baby in direct sunlight or unattended. To ensure the safety and comfort of your child, check your child frequently.

 **WARNING**

- Read instructions and product warning label before use.
- This is not a toy.
- Serious injury or death may occur with improper use.
- Keep away from all flame and heat sources.
- Only for use on infant car seat. Not intended for use indoors or inside motor vehicles.
- To avoid danger of suffocation use as directed.
- Do not attach to crib or playpen.
- Never leave child unattended.
- Never leave child in infant car seat in direct sunlight for any extended period of time.
- Under certain conditions temperature inside cover may be greater than temperature outside cover. Do not let child overheat.
- Never place objects on top of cover.
- Allow ample clearance when unfolding cover. Cover may spring open. Hold cover away from body when unfolding.
- Discard if wire is broken or bent. Discard if fabric is torn.
- Does not protect against scattered or reflected UV radiation.
- Examine cover for wear. Wear may reduce UPF rating.
- Do not modify or add any attachments.
